

Management of Coumadin/Warfarin Perioperatively

- Stop Coumadin four days prior to the scheduled surgery date.
- The day after stopping Coumadin or Warfarin, inject Lovenox under the skin either once or twice per day, as directed on the prescription.
- The last dose of Lovenox will be the morning of the day prior to the surgery.
- Take your usual dosage of Coumadin the evening of the day prior to the surgery.
